

Marta E. Plonska-Brzezinska received her PhD in Chemistry at the University of Bialystok (2005) working with Prof. Krzysztof Winkler. After a Doctoral Research Fellow at the University of California, Davis, working with Prof. Alan Balch and a Postdoctoral Fellow at the University of Clemson, working with Prof. Luis Echegoyen, she came back to her mother university. Her research focus principally on electrochemical properties of fullerenes and carbon-based materials, designing and creating multifunctional nanoarchitectures for energy storage and conversion, electro and photocatalysis, biosensors and sorbents. She is Professor of Chemistry at University of Bialystok, a recipient of an NSC SONATA BIS Starting Grant.
